Ramin Kamalov (Not student of Tsinghua) – BS in Computer Science, CTO

Mariya Yeralieva (2015080337) – BS in Journalism and Business Administration, PR Manager

**Project Name:**

Deeds&Needs

**Project Description:**

Deeds&Needs is a social project which aims to improve the lives and well-being of students – cashless system of mutual assistance.

The aim of this project is to shift from the cash payment service, which is ensured by material resources to exchange units, which would be ensured by human capital (the skill or talent of each participant).

Example: Student A makes tasty pies and student B can help with history homework. However, instead of barter, which had proved to be ineffective even before our era, these students expose their services to the system and provide them for exchange units which can be redeemed for services from other members. So, services which the students do not have real money for (in the first case, to buy pies at the store and in the second to hire a tutor), students can obtain for providing services based on their skills and abilities. Services may vary and depend only on the imagination and skills of participants in the system. The imagination of participants is limited only by the legislation of the Peoples' Republic of China. Moreover, implementation of Gesellian theory is planned within exchange system in order to stimulate activity of its members. Main target customers are students of any degree and university. Implementation of the system is planned via mobile application.

The uniqueness of the system lies in the provision of services not for the money, which students do not have in most of the cases, but for the personal skills and talents of participants.
